

PRML-Course Project

Meeting
Minutes
31/10/2020

Evaluation-2:

- Applied XGBoost, SVM and Decision tree Algorithms on the dataset.
- Trained and tested the model with all three algorithms.

Discussions in the meeting:

- Explained all the algorithms used theoretically and showed it's implementation in python.
- The accuracy was very low for all the algorithms. (about 3-5%).

Agenda for next meeting :

- Work on accuracies.
- Try different feature selection methods, experiment with the data : categorical and numerical features separately and see how we can maximise the accuracy.
